

Organics Recycling policy developments in the UK

Jenny Grant

Head of Organics, REA

#### Who we are

#### Our Subsidiaries

# **UK Waste policy**

Recycling rates for waste from households

- Scotland 41.7%
- Wales 56.7%
- Northern Ireland 48.4%
- England 44.1%

#### Capturing food and garden waste

**2021 CHAPTER 30** 

- Household waste from March 2026
  - Recyclable household waste must be collected for recycling or composting – includes food and garden waste
  - Food waste must be collected at least once a week
  - Food and garden waste may be collected together where—
    - (a) it is not technically or economically practicable to collect recyclable household waste in those recyclable waste streams separately or
    - (b) collecting recyclable household waste in those recyclable waste streams separately has no significant environmental benefit
- Business waste (non-domestic, industrial and commercial)
  - Requirement for food waste collections from March 2025 or March 2027 for micro-firms

# Food and garden waste today

Garden waste: 3.39MT going to composting

### Organics Recycling facilities

#### **AD** sites

Incentives for AD

#### Quality Standards

PAS 100:2018

Specification for composted materials

Total contamination (glass, metal, plastic and other non-stone fragments) >2mm

0.25% w/w

Plastic >2mm

0.12% w/w

Scotland:

Plastic >2mm 0.06% w/w

50% of PAS100 limit

PAS 110:2014

Specification for whole digestate, separated liquor and separated fibre derived from the anaerobic digestion of source-segregated biodegradable materials

Total physical contaminants (glass, metal, plastic and other non-stone man-made fragments) >2mm

0.04-0.36kg/t

Scotland:

Plastic >2mm

3.2-28.8g/t

8% of PAS110 limit

# Contaminated feedstocks

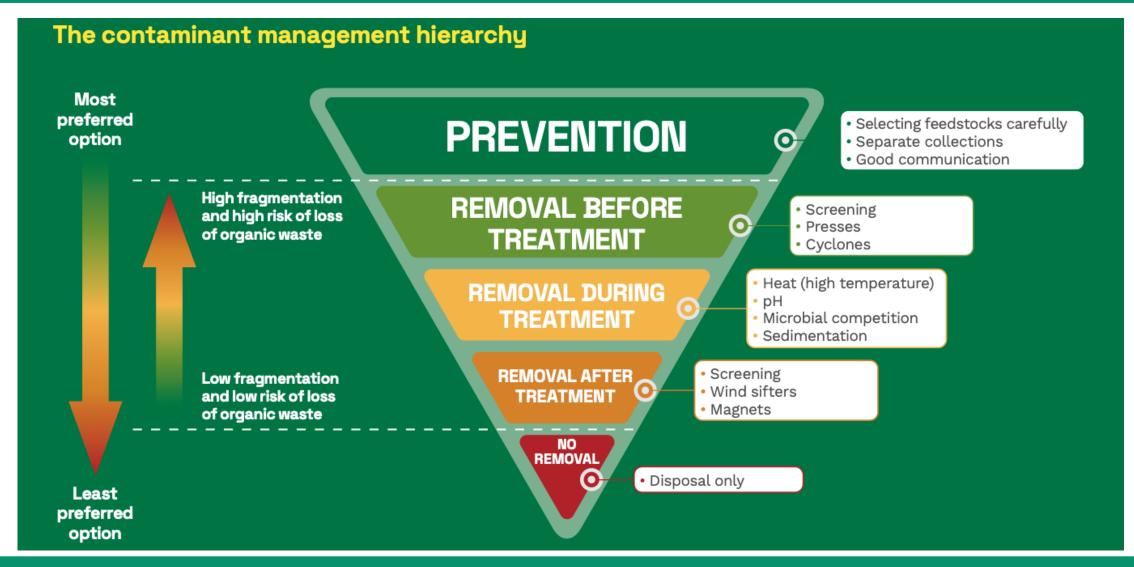

### Contamination

- Level of contamination varies
- Estimate 2-8% typically
- Costs time and money to remove
- Conservative estimate of £7.5M per annum in UK
- Case study
  - AD operator paying £156/t
  - Separate, wash, press and dispose of contamination
- ISWA figures £150-200 per tonne of contamination
- USA 21% of operating costs on contamination removal

#### **Contamination hierarchy**

ISWA - A Practitioner's Guide to Preventing and Managing Contaminants in Organic Waste Recycling

**Standard rules** for contamination (plastic, litter, non compostables)

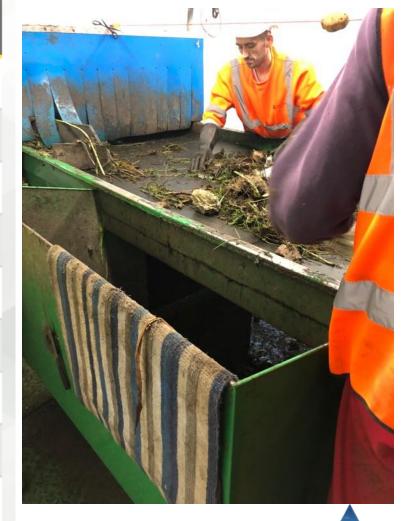

Composting in open systems max 1% w/w
Composting in closed systems max 5% w/w
Anaerobic Digestion max 5% w/w

Plus...

As low as reasonably practical by December 2025

#### **Dealing with contamination on site**

Removal technique	Green waste	Food waste	Packaged food waste	Compost	Digestate
Manual (hand picking)	$\otimes$				
Screening	$\otimes$	$\otimes$		$\otimes$	
Screw separator		$\otimes$	$\odot$		
Centrifugal separator		$\otimes$	$\otimes$		$\otimes$
Floating/ sedimentation		$\otimes$	<b>⊘</b>		
Solubilisation (dissolution)		$\otimes$			
Magnetic separation	$\otimes$			$\otimes$	
Air separator (wind sifter)				$\otimes$	
Density separator				$\odot$	

#### **Education and communication**

Food waste recycling is a clean and easy way to get rid of your unavoidable food waste. We all have it, whether it's tea bags, egg shells or banana skins, this service can be used for it all, even out of date food and bones.

# What can I put in my caddy?

Yes

Out of date food left in fridge

Leftovers from preparation.

or cupboards

Leftovers from meals

No

X Liquids and oils

X Pockoging

X Plastic bags

# Best practice collections

+

Best practice treatment = Quality Products

# Getting it right

# Education and communication

- Make it easy
- Make it normal
- Ongoing

#### Compostables

Making best use of our products

# Thank you!
